FORM 8-K

Current Report
Pursuant to Section 13 or 15(d)
of the Securities Exchange Act of 1934

Date of Report (Date of earliest event reported): April 1, 2019

DARÉ BIOSCIENCE, INC.

(Exact name of registrant as specified in its charter)

Delaware	**001-36395**	**20-4139823**
(State or other jurisdiction of incorporation)	(Commission File Number)	(I.R.S. Employer Identification No.)

3655 Nobel Drive, Suite 260
San Diego, CA 92122
(Address of Principal Executive Offices and Zip Code)

Registrant's telephone number, including area code: **(858) 926-7655**

Not Applicable
(Former name or former address, if changed since last report.)

Check the appropriate box below if the Form 8-K filing is intended to simultaneously satisfy the filing obligation of the registrant under any of the following provisions (see General Instruction A.2. below):

☐ Written communications pursuant to Rule 425 under the Securities Act (17 CFR 230.425)
☐ Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)
☐ Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))
☐ Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Indicate by check mark whether the registrant is an emerging growth company as defined in Rule 405 of the Securities Act of 1933 (§230.405 of this chapter) or Rule 12b-2 of the Securities Exchange Act of 1934 (§240.12b-2 of this chapter).

Emerging growth company x

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. x

Item 8.01 Other Events

Compliance with Nasdaq Minimum Bid Price Rule

On April 1, 2019, Daré Bioscience, Inc. ("Daré") was informed by the Listing Qualifications Department (the "Staff") of The Nasdaq Stock Market LLC that Daré regained compliance with the minimum bid price requirement in Nasdaq Listing Rule 5550(a)(2) as a result of the closing bid price of Daré's common stock being $1.00 per share or greater for the 10 consecutive business day period from March 18, 2019 to March 29, 2019. As previously reported, Daré was not in compliance with the minimum bid price requirement because the closing bid price for its common stock was less than $1.00 for the 30 consecutive business days preceding November 30, 2018. That matter is now closed.

Daré issued a press release regarding it regaining compliance with the minimum bid price requirement, a copy of which is included as Exhibit 99.1 to this report.

Corporate Presentation

Included as Exhibit 99.2 to this report is a presentation about Daré and its product candidates, dated April 1, 2019, which is incorporated herein by reference. Daré intends to use the presentation and its contents in various meetings with investors, securities analysts and others, commencing on April 1, 2019.

Item 9.01 Financial Statements and Exhibits.

(d) Exhibits.

Exhibit Number	Description
99.1	Press release dated April 1, 2019
99.2	Corporate presentation, dated April 1, 2019

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.

Daré Bioscience, Inc. Regains Listing Compliance on Nasdaq

SAN DIEGO, April 1, 2019 (GLOBE NEWSWIRE) -- Daré Bioscience, Inc.(NASDAQ: DARE), a leader in women's health innovation, today announced that it received notice from The Nasdaq Stock Market LLC indicating that the Company regained compliance with the minimum bid price requirement in Nasdaq Listing Rule 5550(a)(2) as a result of the closing bid price of the Company's common stock being $1.00 per share or greater for the 10 consecutive business day period from March 18, 2019 to March 29, 2019 and that the previously reported non-compliance listing matter is now closed.

About Daré Bioscience

Daré Bioscience is a clinical-stage biopharmaceutical company committed to the advancement of innovative products for women's sexual health, vaginal health, fertility, and contraception. The company's mission is to identify, develop and bring to market a portfolio of novel, differentiated therapies that expand treatment options, improve outcomes and facilitate convenience for women in the areas of contraception, vaginal health, sexual health, and fertility.

Daré's product portfolio includes potential first-in-class candidates in clinical development: Ovaprene®, a non-hormonal, monthly contraceptive vaginal ring; Sildenafil Cream, 3.6%, a novel cream formulation of sildenafil to treat female sexual arousal disorder utilizing the active ingredient in Viagra®; DARE-BV1, a unique hydrogel formulation of clindamycin phosphate 2% to treat bacterial vaginosis via a single application; and DARE-HRT1, a combination bio-identical estradiol and progesterone intravaginal ring for hormone replacement therapy following menopause. To learn more about Daré's full portfolio of women's health product candidates, and mission to deliver novel therapies for women, please visit www.darebioscience.com.

Daré may announce material information about its finances, product candidates, clinical trials and other matters using its investor relations website (http://ir.darebioscience.com), SEC filings, press releases, public conference calls and webcasts. Daré will use these channels to distribute material information about the company, and may also use social media to communicate important information about the company, its finances, product candidates, clinical trials and other matters. The information Daré posts on its investor relations website or through social media channels may be deemed to be material information. Daré encourages investors, the media, and others interested in the company to review the information Daré posts on its investor relations website (https://darebioscience.gcs-web.com/) and to follow these Twitter accounts: @SabrinaDareCEO and @DareBioscience. Any updates to the list of social media channels the company may use to communicate information will be posted on the investor relations page of the company's website mentioned above.

Forward Looking Statements

THIS PRESENTATION IS FOR INFORMATIONAL PURPOSES ONLY AND IS NOT AN OFFER TO SELL OR A SOLICITATION OF AN OFFER TO BUY ANY SECURITIES OF DARÉ BIOSCIENCE, INC. ("DARÉ" OR THE "COMPANY"). THIS PRESENTATION INCLUDES CERTAIN INFORMATION OBTAINED FROM TRADE AND STATISTICAL SERVICES, THIRD PARTY PUBLICATIONS, AND OTHER SOURCES. DARÉ HAS NOT INDEPENDENTLY VERIFIED SUCH INFORMATION AND THERE CAN BE NO ASSURANCE AS TO ITS ACCURACY.

ALL STATEMENTS IN THIS PRESENTATION, OTHER THAN STATEMENTS OF HISTORICAL FACT, ARE FORWARD-LOOKING STATEMENTS WITHIN THE MEANING OF FEDERAL SECURITIES LAWS. IN SOME CASES, YOU CAN IDENTIFY FORWARD-LOOKING STATEMENTS BY TERMS SUCH AS "MAY," "WILL," "EXPECT," "PLAN," "ANTICIPATE," "STRATEGY," "DESIGNED," "COULD," "INTEND," "BELIEVE," "ESTIMATE," "TARGET," "POTENTIAL" AND OTHER SIMILAR EXPRESSIONS, OR THE NEGATIVE OF THESE TERMS. AS USED IN THIS PRESENTATION, "FIRST-IN-CATEGORY" IS A FORWARD-LOOKING STATEMENT REGARDING MARKET POTENTIAL OF A PRODUCT CANDIDATE. FORWARD-LOOKING STATEMENTS INVOLVE RISKS, UNCERTAINTIES AND ASSUMPTIONS THAT MAY CAUSE DARÉ'S ACTUAL RESULTS, PERFORMANCE OR ACHIEVEMENTS TO BE MATERIALLY DIFFERENT FROM THOSE EXPRESSED OR IMPLIED BY THE FORWARD-LOOKING STATEMENTS, INCLUDING, WITHOUT LIMITATION RISKS AND UNCERTAINTIES RELATING TO: THE OUTCOME OR SUCCESS OF CLINICAL TRIALS; DARÉ'S ABILITY TO RAISE ADDITIONAL CAPITAL AS NEEDED; DARÉ'S ABILITY TO OBTAIN AND MAINTAIN INTELLECTUAL PROPERTY PROTECTION FOR ITS PRODUCT CANDIDATES; DARÉ'S ABILITY TO DEVELOP PRODUCT CANDIDATES ON THE TIMELINES SET FORTH HEREIN; AND OTHER RISK FACTORS DESCRIBED IN DARÉ'S MOST RECENT ANNUAL REPORT ON FORM 10-K AND QUARTERLY REPORT ON FORM 10-Q FILED WITH THE SECURITIES AND EXCHANGE COMMISSION.

ALL FORWARD-LOOKING STATEMENTS IN THIS PRESENTATION ARE CURRENT ONLY AS OF THE DATE HEREOF AND DARÉ DOES NOT UNDERTAKE ANY OBLIGATION TO UPDATE ANY FORWARD-LOOKING STATEMENT TO REFLECT NEW INFORMATION, FUTURE DEVELOPMENTS OR OTHERWISE, EXCEPT AS REQUIRED BY LAW.

Vision: To become the premier innovation accelerator in women's health.

Mission: We achieve this by identifying, unlocking and advancing candidates with potential to be first-in-category, address persistent unmet needs and promote a better quality of life for women.

Accelerating Innovation in Women's Health

Daring to be different

A pure play biopharmaceutical company focused on improving the health and well bei of women.

Our focus areas include:

- Contraception / Pregnancy Prevention
- Sexual Health
- Vaginal Health
- Fertility

Licensing, Partnering & Value Creation Strategy:

- The portfolio is well positioned to drive upside
- Product candidates are commercially viable and attractive to strategic partners
  - Products that have a ***data package*** including a proof-of-concept and/or the ability to leverage 505(b)(2) regulatory pathway
  - Candidates with the potential to be ***first-in-category*** that ***address persistent unmet needs*** i women's health
  - The ability to deliver products in a more ***personalized*** way for women

Daring to be different

We expect to deliver against multiple milestones over the next 12 - 24 months including:

- Advancing our **DARE-BV1** Bacterial Vaginosis (BV) program into a **Phase 3 trial**
- **Topline readouts** from our two pre-pivotal programs:
  - **Ovaprene** (2H 2019) and
  - **Sildenafil Cream, 3.6%,** (4Q 2020)
- Moving preclinical programs into Phase 1 development
  - **DAER-HRT1** – Hormone Replacement Therapy (HRT/VMS) Phase 1 (2019)
  - **DARE-FRT1** – Fertility and Pregnancy Maintenance (PTB/ART) Phase 1 (2020)
  - **DARE-VVA1** –VVA in ER/PR+ Breast Cancer patients Phase 1 (2020)

Program Overview

DARE-BV1 (Formerly MP-101)
Clindamycin 2% gel for Bacterial Vaginosis
daré
bioscience

DARE-BV1 Overview

Bacterial Vaginosis (BV)

Bio-Adhesive Gel Clindamycin | DARE-BV1® | Phase 3 Initiation

Successful Proof of Concept

- Vaginal application of DARE-BV1 (clindamycin phosphate 2%) demonstrated effectiveness against BV in a proof-of-concept investigator initiated study in women (n=30):[1]
  - 88% of evaluable subjects met clinical cure endpoint at Test-of-Cure visit after single dose administered
  - Favorable efficacy profile over currently approved treatments

505(b)(2) Regulatory Pathway

- Single Phase 3 clinical trial planned for FDA approval

Attractive Market Opportunity

- BV is the most commonly reported vaginal infection in women ages 15-44 [2]
- U.S. prevalence estimated to be ~21 million among women ages 14-49 [2]
- Approved prescription drugs have less than optimal clinical cure rates (37-67%) [3]
- Opportunity for significant upside and market expansion

Patent Coverage

- Patents covering the licensed technology have been granted with terms through 2028
- Additional patents pending would have terms through 2035

daré

Gel Delivery Technology

Features	Description	Innovative Product Profile
In-Situ Gelation	Undergoes solution to gel (sol-to-gel) transition using body temperature as the trigger	• Allows product to be easily and directly placed at the site of infection • Increased viscosity following application keeping the product at the site of application
Sustained-Erosion	Platform can be optimized to erode over a period of hours to multiple days	• Designed for a dual-release pattern providing maximal exposure time and amount of drug at the site of action • Allows optimization of dosing duration for clindamycin – a time dependent antibiotic
Bio-Resorption and Adhesion	Hydrophilic ingredients are compatible with a variety of APIs	• Reinforces ability of product to bio-adhere at the site of application • Eliminates need to remove product following completion of treatment regimen

Bacterial Vaginosis

DARE-BV1 Proof of Principle Study Design

Study Objective: Study the Efficacy and Safety of DARE-BV1 in the Treatment of Bacterial Vaginosis (n = 30)

Day 1 Baseline Visit	Day 7 - 14 Test-of-Cure Visit	Day 21 - 30 Continued Clinical Response Visit
• **Single dose administered**	• **Patients questioned regarding comfort level & re-examined**	• **Patients questioned regarding experience & re-examined**
Tests Performed: • Physiological symptoms • pH • Saline "wet mount" • 10% KOH "whiff test" • Urine pregnancy (if needed)	Tests Performed: • Physiological symptoms • pH • Saline "wet mount" • 10% KOH "whiff test" • Urine pregnancy (if needed)	Tests Performed: • Physiological symptoms • pH • Saline "wet mount" • 10% KOH "whiff test" • Urine pregnancy (if needed)

- Eligibility: Female subjects 18 years or older with confirmed clinical diagnosis of BV
- Primary Endpoint: Clinical Cure at Test-of-Cure visit (defined as resolution of clinical findings from baseline visit);
- Secondary Endpoints: Proportion of patients with therapeutic and bacteriologic cures,[1,2]
- Safety: Patients were questioned about their comfort level and adverse reactions they experienced.

daré

1. Therapeutic cure was a composite endpoint, which required both clinical cure (defined as clinical cure: resolution of all 4 Amsel criteria) and bacteriologic cure (Nugent score < 4). Bacteriologic cure required a Nugent score < 4.
2. Amsel & Gram Stain Criteria: https://www.cdc.gov/std/tg2015/bv.htm

Bacterial Vaginosis

DARE-BV1 Proof of Principle Study Design

A single dose of DARE-BV1 demonstrated **high clinical cure rate** compared to other approved products

Product	Clinical (Amsel) Cure	Bacteriologic (Nugent) Cure	Therapeutic Cure
DARE-BV1 *novel gel (clindamycin)*	88%	57%*	57%*
Solesec®[1] *(secnidazole 2g oral granules)*	53-68%	40-46%	35-40%
Clindesse®[2] *clindamycin phosphate Vaginal Cream, 2%*	41-64%	45-57%	30-42%
Metrogel, 1.3% [3]	37%	20%	17%

* Based on data from 9 evaluable patients

- 26 of 30 women completed the study
- Test-of-Cure Visit (Day 7 – 14)
  - **23 of 26 (88%) women achieved clinical cure based on Amsel criteria**
  - 4 of 7 (57%) women had bacteriologic cure and 4 of 7 (57%) had therapeutic cure
- Continued clinical response visit (Day 21 – 30)
  - **23 of 24 (96%) women showed continued clinical cure**
  - 8 of 9 women had bacteriologic cure and 7 of 9 had therapeutic cure

DARE-BV1

Bacterial Vaginosis Opportunity Overview

DARE-BV1 offers an attractive value proposition based on our belief that it has a low clinical risk profile, low development and regulatory costs, and an attractive commercial opportunity

Proof of principal study complete
- 88% clinical cure rate in evaluable subjects
- favorable efficacy profile compared to currently approved treatments

Same API (clindamycin phosphate 2%) as in currently approved treatment

Low Clinical Risk

Single Phase 3 clinical trial for FDA approval [1]

Exploiting the 505(b)2 regulatory pathway

Low Development Cost
Anticipate less than $10 million
(Includes manufacturing, clinical trial, regulatory filing & action)

Approximately 21 M cases of BV reported annually in the US

Approved prescription drugs have low patient share due to limited efficacy

Opportunity for upside and market expansion

Significant Market Opportunity

daré

1. Based on prior sponsor communications with the FDA, one successful Phase 3 study with sufficient power and size may be sufficient for marketing approval in the U.S.

1. Global Market Insights, https://globenewswire.com/news-release/2016/05/19/841462/0/en/Contraceptives-Market-size-to-exceed-33-Billion-by-2023-Global-Market-Insights-Inc.html

New Contraceptive Option
Ovaprene® Overview

Successful Proof of Concept Study

- Ovaprene demonstrated effectiveness in preventing sperm from entering the cervical canal in a proof-of-concept study in women (n=20):[1]
  - No viable sperm in the cervical mucus
  - No colposcopic abnormalities

CDRH (Device) Regulatory Pathway

- Single pivotal clinical trial expected for FDA approval

Attractive Market Opportunity

- >$6 billion in US Rx sales of contraceptive products (2016).[2]
- 40 million women of reproductive age currently use a contraceptive method.[3]

Patent Coverage

- Patents covering the licensed technology have been granted with terms through 3Q 2028
- Opportunity for Patent Term Extension (PTE) and potential new patents

New Contraceptive Option

Ovaprene® Overview

Women's Preferences

1. Effective Pregnancy Prevention
2. Convenient Product Forms
   - Independent surveys revealed that the vaginal ring has many of the features women deemed extremely important.[1]
3. Method Mix
   - >70% of women who practice contraception currently use non-coital (*not in the moment)* methods.[2]
4. Less Hormones
   - A majority of women prefer a monthly option with a lower hormone dose than the pill.[3]

CONTRACEPTIVE METHOD CHOICE

Most effective method used in the past month by U.S. women, 2014

METHOD	No. of women	% of women aged 15–44	% of women at risk of unintended pregnancy
Pill	9,572,477	15.6	22.7
Tubal (female) sterilization	8,225,149	13.4	19.5

New Contraceptive Option

Ovaprene® Overview

U.S. Regulatory Strategy

- PMA with CDRH (Medical Device Division) as lead review division.
- Pathway expected to be based on similar CDRH approvals - Example: Caya® diaphragm.*

Step 1 – Postcoital test (PCT) 2018 / 2019*

- The study is enrolling 50 couples.
  - 25 women complete a total of 21 visits
- Evaluated over the course of five menstrual cycles.
- Each woman's cervical mucus will be examined at several points during the study:
  - Cycle 1 - Baseline (excludes the use of any product),
  - Cycle 2 - Use of a barrier method (diaphragm),
  - Cycles 3,4 and 5 - Ovaprene vaginal ring.
- Assess motile sperm per high powered field (HPF) in the cervical mucus, post coitus.
- Safety assessments, PK, acceptability, fit, and ease of use.

- Data from the study is expected to be available in the second half of 2019.
- **If there is demonstration of feasibility in the PCT clinical trial, the Company intends to prepare and file an Investigational Device Exemption (IDE) with the FDA to commence a pivotal clinical trial** to support marketing approvals of Ovaprene in the United States, Europe and other countries worldwide.

Step 2 – Pivotal Study 2020 / 2021*

- Single pivotal clinical (expected).
- N= ~250 completers over 6 months of use.
  - Primary Endpoints: Safety & Efficacy
    - Pregnancy probability.
  - Secondary Endpoints:
    - Acceptability/product fit/ease of us
    - Assessments of vaginal health.

daré

*Anticipated regulatory pathway and timelines. Daré has not had any communications with the FDA regarding the specific PMA requirements for Ovaprene.

New Contraceptive Option

Ovaprene® Overview

Features Desired Most in Birth Control:[1-4]	Design Features of Ovaprene:[5,6]
Convenience (Easy to Use & Easy to Remember)	**Monthly Ring Product Form** *Women chose rings for the convenience of a **non-daily option.***
Hormone Free	**No Hormones in the API** *Unique dual action MOA (spermiostatic & barrier).*
Efficacy	**Expected Typical Use Effectiveness Comparable to Hormone Contraception** (88% vs 91%).
Favorable Side Effect Profile	**No Colposcopic Abnormalities** *No significant changes in vaginal flora.* *No serious adverse effects observed in prior published study.*
Easily Manage Fertility	**No Systemic Activity** *Inserted and removed without a provider.* *Immediate return to fertility.*

Female Sexual Arousal Disorder (FSAD)
Sildenafil Cream, 3.6%

Topical Cream Sildenafil	**Sildenafil Cream**, 3.6%	*Top line*

Successful Proof of Concept

- Sildenafil Cream, 3.6% improved genital blood flow in a proof-of-concept study (n=31):[1]
  - Efficacy signal observed in both pre and postmenopausal patients
  - Excellent systemic/local safety and tolerability profile

505(b)(2) Regulatory Pathway

- Ability to leverage the safety profile of sildenafil (Viagra®) for FDA submission package

Attractive Market Opportunity[2]

- 33% of females in the U.S. (21 to 60 years old) experience symptoms of low or no sexual arousal
- 16% (~10m women) are considered distressed and are seeking a solution to improve their condition

Patent Coverage

- Patents covering the licensed technology have been granted with terms through 2031 (through June 2029 in the U.S.)
- No ANDA route: ANDA is not currently an option for topicals that result in low systemic uptake

daré

1. Data on file
2. Ad Hoc Market Research: FSAD Prevalence Report (Oct 2015) conducted for SST LLC. Based on US Census projections for 2016.

Female Sexual Arousal Disorder (FSAD)

Sildenafil Cream 3.6%

Dyspareunia	Vulvar-Vaginal Atrophy	Hypoactive Sexual Desire Disorder (HSDD)	Female Sexual Arousal Disorder (FSAD)

Imvexxy (estradiol vaginal insert)

Osphena (ospemifene) tablets 60 mg

Premarin (conjugated estrogens) vaginal cream

No Approved Products

With its approval of Addyi®, FDA has now acknowledged and formally classified the distinct and separate disorders that comprise Female Sexual Dysfunction.

Where HSDD is characterized primarily by a lack of sexual desire, **FSAD is characterized primarily by an inability to attain or maintain sufficient physical sexual arousal.**

daré

Female Sexual Arousal Disorder (FSAD)

Sildenafil Cream 3.6%

FSAD is characterized primarily by an inability to attain or maintain sufficient physical sexual arousal; it is also characterized by distress or interpersonal difficulty.*

- Estimated 23-33% of women suffer from arousal disorder:
  - Meta-analysis of 95 studies from 2000-2014 indicated the prevalence of Female Sexual Dysfunction in premenopausal women worldwide is 40.9%, and difficulty with arousal alone is 23%.[1]
  - **33% of women in the U.S. age 21 to 60** (approximately 20 million women), experience symptoms of low or no sexual arousal.[2,3]
  - **10 million women are considered distressed and actively seeking treatment.**[2]

*Diagnostic and Statistical Manual 4th Edition Text Revision (DSM IV TR), defines female sexual arousal disorder as a persistent or recurrent inability to attain or to maintain until completion of the sexual activity, an adequate lubrication-swelling response of sexual excitement. The diagnostic criteria also state that the inability causes marked distress or interpersonal difficulty, is not better accounted for by another Axis I disorder (except another sexual dysfunction), and is not due exclusively to the direct physiological effects of a substance (e.g., a drug of abuse, a medication) or a general medical condition.

Female Sexual Arousal Disorder (FSAD)

Sildenafil Cream 3.6%

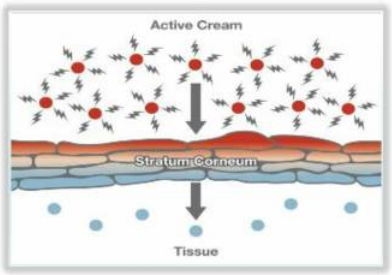
Formulation Innovation

- Sildenafil Cream, 3.6% designed to directly increase local blood flow to the genital tissue.
- The formulation delivers localized action, with minimal systemic uptake of the active drug.[1]



SST Formulation Technology

6 issued patents in the U.S. on the topical delivery of Sildenafil and other PDE-5 inhibitors.

- Leveraging the known therapeutic benefit of oral sildenafil to stimulate increased blood flow to the genital tissue.
- If approved, Sildenafil Cream, 3.6% may offer a safe, effective and 'on demand' solution to difficulties with sexual arousal.

daré

1. Data on file

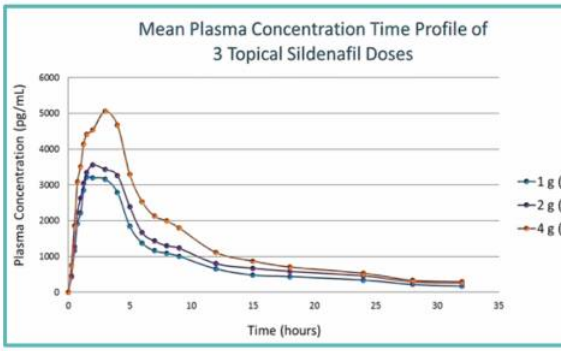
Female Sexual Arousal Disorder (FSAD)

Sildenafil Cream, 3.6%

Phase 1 Study of SST-6007 (Sildenafil Cream, 3.6%)[1]

- Normal healthy postmenopausal women were dosed with escalating doses of Sildenafil Cream, 3.6%, using a cross-over study design.
- Topical sildenafil had significantly lower systemic exposure compared to a 50 mg oral sildenafil dose
  - AUC – 3-6%
  - C_{max} – 1-2%
- Safe and very well tolerated at clinically relevant doses (1-2g)
- Favorable product characteristics as self reported by subjects
  - Easy to use
  - Readily absorbed

Treatment	N	Sildenafil Single Dose	C_{max} (ng/ml)	T_{max} (hr)	AUC (h*ng
Topical Sildenafil 1 g of cream	20	35 mg	3.4	2.37	25
Topical Sildenafil 2 g of cream	20	71 mg	3.8	2.27	30
Topical Sildenafil 4 g of cream	19	142 mg	5.3	2.22	42



Phase 2a Study of SST-6007 (Sildenafil Cream, 3.6%)[1]

- Demonstrated increased blood flow in the genital tissue compared to placebo (mean change in VPA analysis) in 31 women (pre and postmenopausal) ~30 minutes post dosing

daré

1. Data on file. Sildenafil Cream, 3.6% was previously known as SST-6007.

Female Sexual Arousal Disorder (FSAD)

Sildenafil Cream 3.6%

Phase 2b Program: Continue to explore additional clinical and non-clinical work that might be valuable or required to support the overall program and the anticipated design of the Phase 2b.

Content Validity
Initiated (4Q 2018)

- A content validity study is designed to help ensure the concepts we plan to measure are the most important and relevant to our target population.
- This is a non-interventional study – participants will not be asked to use or evaluate any products.

Planned Type C Meeting
2019

- We will request at Type C meeting to get feedback on whether the agency agrees that the patient reported outcomes (PRO) instruments are ***content valid*** for the target population.

At Home Study
2b At Home Study Initiation Anticipated 2019
Topline Data – 4Q 2020

- The Phase 2b at-home study will allow patients to use the investigational product and placebo in their home setting.
- The FDA is agreeable to a 12-week Phase 2b for Sildenafil Cream, 3.6% to assess reasonable safety and preliminary efficacy.
- The 2016 Draft Guidance reflects expectations regarding Phase 3 study length and patient population.

Key Takeaways:
- The Phase 2b program will consist of a content validation component (ongoing), followed by at-home dosing of the investigational product and a placebo control.
- The plan is to use the selected PRO instrument and FDA agreed upon endpoints for the Phase 2b and Phase 3 clinical trials.

Innovative Vaginal Drug Delivery
Well characterized therapeutic options
daré
bioscience

Intravaginal Ring (IVR) Technology Platform

Daré has an exclusive, global license to Juniper's novel IVR technology originally developed by Dr. Robert Langer from MIT[1] and Dr. William Crowley[2] from Massachusetts General Hospital and Harvard Medical School. Daré's exclusive license covers all rings in development as well as additional applications of the IVR technology platform in other therapeutic areas.

- Features of the Juniper intravaginal ring technology include:
  - Sustained drug delivery
  - Variable dosing and duration
  - Single or multiple drug delivery via a solid ethylene vinyl acetate polymer matrix (without the need for a membrane or reservoir to contain the active drug or control the release)
- Current 505(b)(2) candidates licensed from Juniper include:
  - **DARE-HRT1**
    - Formerly JNP-0201, a combination bio-identical estradiol + bio-identical progesterone ring for hormone replacement therapy
  - **DARE-FRT1**
    - Formerly JNP-0301, a bio-identical progesterone ring for the prevention of preterm birth and for fertility support as part of an IVF treatment plan

Hormone Replacement Therapy (HRT)

DARE-HRT1 (bio-identical estradiol + progesterone)

IVR	DARE-HRT1[1]
Bio-identical Estradiol + Bio-identical progesterone	

HRT remains the most effective treatment for vasomotor symptoms (VMS) and the genitourinary syndrome of menopause (GSM) and has been shown to prevent bone loss and fracture.[1]

- 45M women in U.S. approaching or in menopause.[2]
- 2012 NAMS consensus statement supports HRT in peri- and post-menopausal women – estrogen to reduce symptoms and progesterone to prevent thickening of uterine wall.[3]
- NAMS recommends non-oral route over oral.[3]
- 2002 Women's Health Initiative (WHI) study showed that the long-term use of certain synthetic hormones (a combination of medroxyprogesterone and conjugated equine estrogens) increased the risk of breast cancer, stroke, heart attack and blood clots

$2.2 Billion U.S. Mark

Hormone Replacement Therapy (HRT)

DARE-HRT1 (bio-identical estradiol + bio-identical progesterone)

Phase 1 - HRT

DARE-HRT1 for the treatment of VMS due to menopause – combination bio-identical estradiol and progesterone in a convenient 28 day IVR

- Proposed Study:
  - A Phase 1, Open-Label, 3-arm Parallel Group Study to Evaluate the Pharmacokinetics and Safety of DARE-HRT1 (80 µg and 160 µg Estradiol/ 4 mg and 8 mg Progesterone Intravaginal Rings) in Healthy Post-Menopausal Women.
- Primary Objectives:
  - To describe the PK parameters over 28 days using two different dose combinations of DARE-HRT1 Intravaginal ring (IVR):
    - Estradiol 80 µg/Progesterone 4 mg IVR
    - Estradiol 160 µg/Progesterone 8 mg IVR
  - Identify the steady-state PK after 28 days of each DARE-HRT1
- N=30

Pregnancy Maintenance

DARE-FRT1 (bio-identical progesterone)

- Prevention of Pre-term Birth (PTB)
  - In the US, approximately 12% of pregnancies are preterm (less than 37 weeks)[1]
  - Standard interventions include steroids, hormones and tocolytic agents to stop/slow the frequency and duration of contractions[2]
- Assisted Reproductive Technologies (ART)
  - The global ART market is expected to reach **USD 45 billion by 2025**, according to a new report by Grand View Research, Inc.[3]
    - Childbearing postponement is a high impact driver of the infertility treatment market.
    - Increasing marital age, rising tobacco and alcohol consumption, and increasing obesity rates are some of the other factors contributing to the market growth.
    - Furthermore, increasing incidence rate of conditions such as poly-cystic ovarian syndrome (PCOS), tubal factors and endometriosis are other drivers of the market.
  - Record number of women using IVF to get pregnant [4]
    - More American women have had medical help to have their babies than ever, according to the latest annual report from the Society for Assisted Reproductive Technology.

Vaginally Delivered Tamoxifen for VVA
DARE-VVA1

Vaginal Insert SERM (tamoxifen)	DARE-VVA1^

Vaginally Delivered Tamoxifen to treat VVA in HR+ Breast Cancer Patients

- DARE-VVA1 (Formerly PT-101)
  - A proprietary formulation of tamoxifen for vaginal administration.
  - Potential to be the first treatment specifically approved for the treatment of vulvar and vaginal atrophy (VVA) in patients with hormone-receptor positive (HR+) breast cancer.
- VVA is a chronic condition characterized by pain during intercourse, vaginal dryness and irritation.
  - Most women use localized estrogen therapy which is contraindicated for the more than two million women diagnosed with, or at risk of recurrence of, ER-positive and PR-positive breast cancer.[1]
  - Daré intends to develop this novel local application of tamoxifen to mitigate the symptoms of VVA for patients with or at risk for hormone-receptor-positive breast cancer, including women currently on anti-cancer therapy.
  - Due to the use of aromatase inhibitors for the treatment of HR+ breast cancer, the prevalence of VVA in postmenopausal breast cancer patients is reported to be between 42 and 70 percent.[2]

daré

Vaginal Tamoxifen – Proof of Concept Study[1]

- This exploratory study in four postmenopausal women diagnosed with VVA demonstrated that a self-administered vaginal suppository containing tamoxifen (20mg) dosed daily for one week and twice weekly for three months was effective in reducing vaginal pH and vaginal dryness

Vaginal Tamoxifen	**Enrollment (Baseline)**	**On Treatment (Month 3)**	**Paired Difference (Baseline vs. Month 3)**
Median Vaginal pH Lower pH value is a measure of symptom relief *Normal vaginal pH is usually less than 4.5.*[2]	**7.1** range 6.5 to 7.5	**5.0** range 5.0 to 5.2	**-2.0 median** range -2.5 to -1.5
Vaginal Dryness Rated using a visual analogue scale (VAS) that ranged from: **0** = Not bothered by dryness **10** = Extremely bothered by dryness Decreased vaginal dryness is a measure of symptom relief	**8.0** range of 7.5 to 9.0	**3.0** range 2.0 to 3.0	**-5.5 median** range -6.0 to -4.5

- In addition, systemic absorption of tamoxifen was not significant.
  - After 8 weeks of study treatment with vaginal tamoxifen, the median plasma concentration of tamoxifen was **5.8 ng/ml**, with a range of 1.0 to 10.0 ng/ml
  - In comparison, after 3 months of administration of 20mg, once-daily oral tamoxifen citrate (Nolvadex),[2] the average steady st plasma concentration of tamoxifen is **122 ng/ml** with a range of 71 to 183 ng/ml

Strategic Pre-Clinical Candidates
Contraceptives that address global gaps
daré
bioscience

A New Long Acting Contraceptive Option

Microparticle 6 & 12 Month Injectable Contraception

Injectable Etonogestrel | ORB 204 & 214

ORB-204 and ORB-214, injectable etonogestrel[1]

The initial development on Orbis' long-acting injectable contraceptive program was carried out under a subcontract funded by Family Health International (FHI 360) through a grant from the **Bill & Melinda Gates Foundation**.

- Pre-clinical studies for the 6- and 12- month formulations have been completed to date:
  - Establishing pharmacokinetics and pharmacodynamics profiles.

An injectable contraceptive is designed to provide discreet, non-invasive protection over several months

- Limitations of the currently marketed injectable contraceptive: provides contraceptive protection for only three months, and can delay the ability to get pregnant for up to ten months after receiving the injection.

Target product profile of long-acting injectable

- Prolonged duration (6 to 12 months), improved ease of use, with an improved side effect profile and predictable return to fertility.

A New Contraceptive Target

DARE-RH1 CatSper

Ca2+ Target | DARE-RH1

A Novel Approach To Male And Female Contraception.

- The identification of the CatSper target represents the potential to develop a novel class of non-hormonal contraceptive products for both men and women.
  - The discovery of a sperm-specific ion channel, CatSper, was validated in animal models where it was demonstrated that male mice lacking CatSper have poor sperm motility.
- CatSper proteins are ion channels expressed solely in the membranes of sperm flagellum and are essential to sperm motility.
- Pre-clinical research has demonstrated CatSper mediates hyperactive motility of sperm.
  - Sperm hyperactivity is necessary to penetrate the physical barrier known as the zona pellucida which encloses the ovum and protects the egg.[1]
  - The contraceptive benefit of targeting CatSper is achieved by inhibiting sperm hyperactivity and preventing egg fertilization.

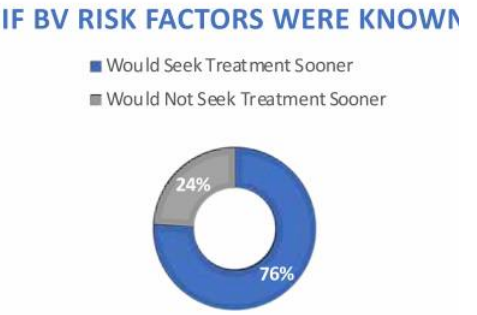
Bacterial Vaginosis Market Insights

American Sexual Health Association (ASHA), in conjunction with Harris Poll, conducted a national survey of 304 women ages 18 to 49 who have had bacterial vaginosis (BV). The survey was conducted online by Harris Poll on behalf of Symbiomix Therapeutics, LLC, a Lupin company, and the ASHA within the United States between September 14 and 29, 2017 among 304 US women aged 18-49 who have been diagnosed by a healthcare professional with BV within the past 2 years ("women with bacterial vaginosis").

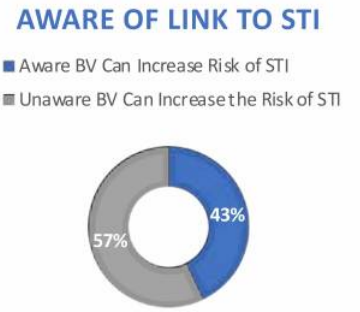
Bacterial Vaginosis Market Insights

American Sexual Health Association (ASHA) National Bacterial Vaginosis Survey

- **76%** of women with BV stated they would have gone to **see a healthcare professional sooner** if they were aware of the risks associated with BV if left untreated



- **Only 43% of women with BV are aware** that if left untreated, BV can cause an increased risk of sexually transmitted infections (STIs)



http://www.ashasexualhealth.org/understanding-womens-experiences-with-bacterial-vaginosis/

Bacterial Vaginosis Market Insights

American Sexual Health Association (ASHA) National Bacterial Vaginosis Survey

- According to the ASHA survey, 62% of women mistake BV for a yeast infection prior to diagnosis
- Most women with BV feel self-conscious (68%) and/or embarrassed (66%) due to their condition
- Women with BV avoid everyday activities including being intimate with their spouse/partner (79%), working out (27%), or going on a first date (17%)

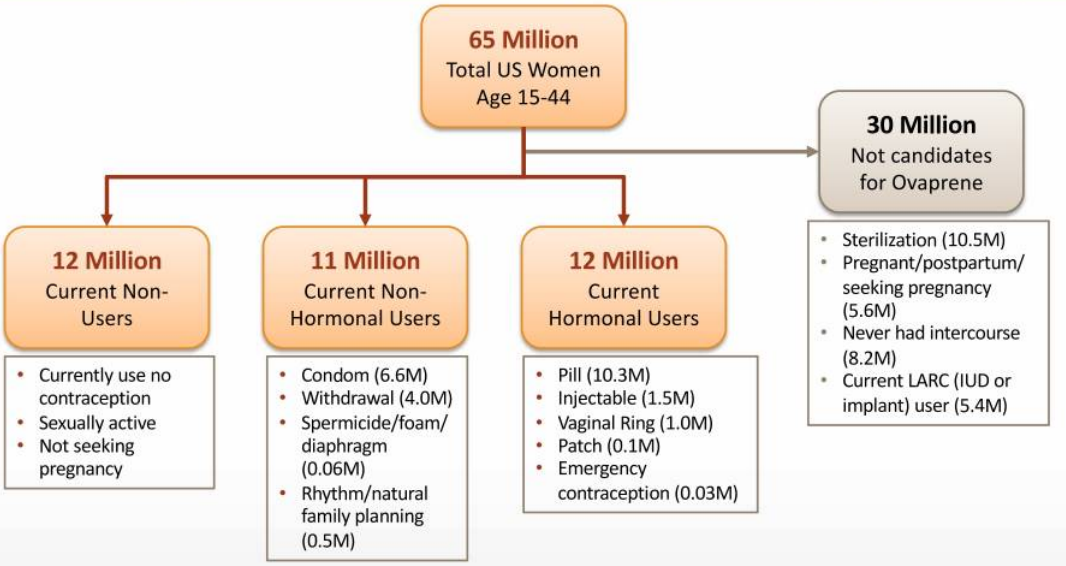
https://www.census.gov/programs-surveys/popproj.html

Ovaprene Potential – Total Market Size

There are currently 35 million US women who could potentially choose Ovaprene for contraception



Source: CDC National Survey for Family Growth,2013-2015 dataset, cdc.gov. Contraceptive use data applied to 2019 population data from US Census

Negative Information About Hormones is Persistent in the Public Domain

As a non-hormonal option, Ovaprene does not have to overcome myths or negative "press"

5 Reasons Women Avoid Birth Control

Reason #1: "I don't want to get fat"

Reason #2: "It might make me depressed"

Reason #3: "Birth control causes cancer"

Reason #4: "I don't want to put chemicals in my body"

Reason #5: "I'm not at risk for getting pregnant"

6 Reasons Why You Shouldn't Take The Pill Long Term

April 4, 2017 by Fertility Friday / 21 Comments

- The pill lowers your sex drive
- The pill shrinks your clitoris and causes painful sex
- The pill causes depression and anxiety
- Long term pill use puts you at an increased risk of cervical cancer
- Long term pill use is associated with a delay in your return to fertility

1. Hormonal Birth Control Comes with Side Effects
2. Birth Control is Full of Hormones/Chemicals
3. Birth Control Works Against Your Body
4. Birth Control *May* Cause Abortions
5. A Whole Host of Other Reasons

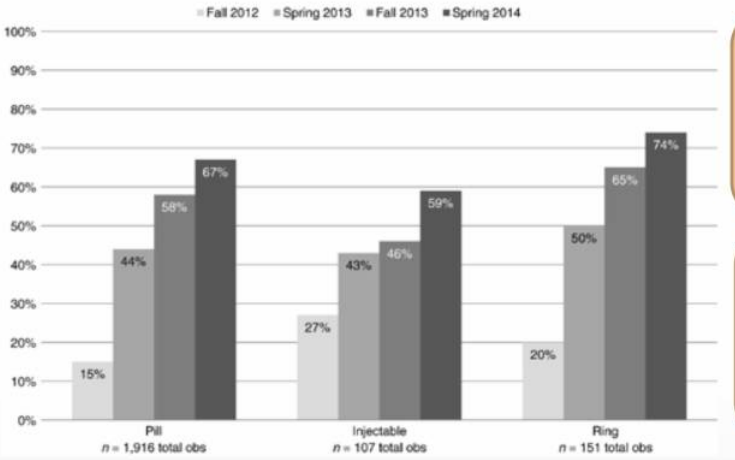
Most Women Pay $0 For Birth Control
Since the ACA Was Enacted

Percent of Women with $0 Copay for Birth Control Over Time

(n=892 women age 18-39 with private health insurance who used a prescription contraceptive method)



By spring 2014, mean and median out-of-pocket costs for the pill were $6.48 and $0 per month, respectively

HHS issued a clarification in May 2015 that required coverage of at least 1 product per method with $0 copay – therefore the percentages have likely increased since this data

US Dept of Health and Human Services (HHS) FAQs About ACA Implementation (Part XXVI), www.cms.gov

ACA Contraceptive Mandate:
Current Status of Contraceptive Policy

- Insurance plans must cover all FDA-approved methods with no copay or cost sharing to patients[1]
  - They must cover at least one type of each method in each category
- 62.8 million women (age 18-64) now have birth control coverage with no cost sharing[2]
  - Exemptions and accommodations for religious and moral objections are in place, but they affect only 6,400 to 127,000 women[3]
  - The latest attempts by the current administration to broaden the exemption has been blocked by two federal courts[4]
- If Ovaprene is approved, it has the potential to be the only product in the category, as it is a vaginal ring with a spermiostatic active.

Minimum Contraceptive Coverage Requirements Clarified by HHS Guidance

Contraceptive Method	Products/Options	Must Cover
Surgical sterilization	Also called tubal ligation	√
Implant sterilization	Only Essure available	√
Implantable Rod	Multiple	√ at least 1
IUD – Copper	Only ParaGard available	√
IUD – Progestin	Multiple	√ at least 1
Injection	Multiple	√ at least 1 (may be generic)
Oral contraceptives – combined	Multiple	√ at least 1 (may be generic)
Oral Contraceptives – progestin only	Multiple	√ at least 1 (may be generic)
Oral Contraceptives – extended/continuous use	Multiple	√ at least 1 (may be generic)
Patch	Multiple**	√ at least 1 (may be generic)
Vaginal Ring	Only Nuvaring available	√
Diaphragm with Spermicide	Only Milex Omniflex available	√
Sponge with Spermicide	Only Today Sponge available	√*

Sildenafil Cream, 3.6%
FSAD Demographic Insights & Concept Test

Market Research Report Conducted by Ad Hoc Research on behalf of Strategic Science & Technologies, LLC. 222 Third Street, Suite 2242, Cambridge, MA 02142 – December 2015

FSAD - Psychological & Physiological Impact

The Current Experience of FSAD Sufferers

(Physical and Psychological)

Experience of FSAD Sufferers

- The concept definitely **has potential**. FSAD sufferers are likely to purchase it and are willing to give it a try.
- A few questions remain:

1. What do they currently experience during sexual activity that they are hoping the cream will rectify?

They often feel….	They do not often feel…
The inability to attain an adequate level of sexual excitement	Genital tenseness or tightness
The lack of desire for intimacy	Genital pulsing or throbbing
Lack of genital or clitoral fullness, pressure or engorgement	The feeling of muscle contractions in their genitals
Lack of genital wetness or lubrication	The feeling of readiness
	Satisfaction with their level of physical arousal

2. What are their main physical desires when it comes intimacy?

- They are **desperate for their bodies to respond**, be it to…
  - Intimacy;
  - An intimate touch;
  - Touch.

Experience of Female Sexual Arousal Disorder (FSAD) Sufferers

3. What is the psychological impact of this disorder?

- The impact appears to be immense. Emotions run the gamut from **dissatisfaction with** to **anger about their sex lives**.
- The most frequent feelings include:
  - **Dissatisfaction** with their sex lives;
  - **Bothered** by their low sexual desire;
  - **Unhappiness** about their sexual relationships; and
  - **Frustration** due to their sexual problems.
- Thus, conveying an understanding of these feelings, either in claims, in communications or both, will promote interest in the product.

4. What "remedies" have they tried to combat the disorder?

3 the average number of remedies tried to combat FSAD

- **Almost all FSAD sufferers surveyed have tried "something"** to treat their difficulties getting or staying physically aroused.
- The most common are **topical lubricants** and **a vibrator/other accessory** for stimulation.

Sildenafil Cream, 3.6% Product Profile Market Research

Sildenafil Cream, 3.6%
Concept Test

Sildenafil Cream, 3.6% Concept Testing

402 American women between the ages of 21 and 60 and suffering from *Female Sexual Arousal Disorder* (FSAD) were surveyed via web panel between November 18 and 23, 2015.

The purpose of this study is to measure **the market potential of a topical cream version of *sildenafil* targeting women** as a potential remedy for FSAD.

1 What degree of consumer interest is there in this product idea?

- **A significant degree.** Many FSAD sufferers have been experiencing symptoms **for more than a year**. In addition to the **physical symptoms** they experience, the **psychological impact** of the disorder is quite burdensome.
- On average, FSAD sufferers have tried approximately **3 different remedies –** chief among them **topical lubricants** and **vibrators**. However, they have found little to no relief.
- FSAD sufferers **like** the idea. They perceive it to be **different** from other remedies they have put to the test and they believe it will **meet their needs**.
- FSAD sufferers are **ready to try something new** – especially one that promises no side effects.

2 What are the potential drivers of and barriers to adoption of the product?

Potential Drivers	Potential Barriers
They want to give it a **try.** They are ready to try something new.	**Embarrassment** (in front of their partners, doctors and pharmacists).
They want to **increase their sex drive/sexual arousal**.	**Believability**: will it work? They have tried many other "remedies" that have not.

3

What are the most motivating claims?

- In concrete terms, the elements of the concept they **like the most** are:
  - ✓ No side effects (the #1 claim, by a very wide margin);
  - ✓ Proven safe;
  - ✓ Clinically tested;
  - ✓ Odorless;
  - ✓ Absorbs completely;
  - ✓ Available without a prescription.

- Any support point that **enhances the legitimacy** of the product is naturally motivating, be it:
  - ✓ Doctor recommended;
  - ✓ Available by prescription only for two years before being available without a prescription;
  - ✓ The same active ingredient as in *Viagra* (although slightly less so than the previous two).

Sildenafil Cream, 3.6% Concept Testing – Cream Formulation

4

It's not a pill. How do FSAD sufferers react to that?

- Pills tend to be synonymous with **side effects**, need to be **taken regularly** to be effective and their contents are **metabolized by the liver** because they **enter the bloodstream**.
- FSAD sufferers agree that these are the primary disadvantages of pills.

Importance that this product provide the following features: **Is not a pill that I have to swallow**	% Very Important	42%
	% Most important	2%
Importance that this product provide the following features: **Is a cream with targeted local delivery**	% Very Important	45%
	% Most important	1%
There are typically **more side effects** with a pill	% Very significant disadvantage	73%
Some pills need to be **taken every day** for the medication to work	% Very significant disadvantage	68%
With a pill, **the liver** has to process the medication	% Very significant disadvantage	59%
A pill impacts the **brain's chemistry**	% Very significant disadvantage	53%
A pill requires **systemic absorption**	% Very significant disadvantage	46%
With a pill, the medication **enters the bloodstream**	% Very significant disadvantage	44%

daré

Sildenafil Cream, 3.6% Concept Testing – Concept Acceptors

5 **What is the profile of *Concept Acceptors* (in terms of symptoms experienced, relationship to the condition of FSAD, etc.)?**

- Concept Acceptors are **not widely different** from FSAD sufferers as a whole. However, they do appear to be the **most severe sufferers** of FSAD:

- **The intensity of their symptoms and feelings is much stronger.**
  - They experience some of the **physical symptoms** more frequently, such as:
    - Lack of genital wetness or lubrication;
    - Lack of genital or clitoral fullness, pressure or engorgement;
    - Lack of desire for intimacy and;
    - Genital tenseness or tightness.
  - Not surprisingly, they have **an even deeper desire:**
    - **For their bodies to respond to touch and intimacy**, the way they used to;
    - To **have help becoming/staying physically aroused**.
  - On an emotional level, they are **even MORE**…
    - **Bothered** by their low sexual desire;
    - **Dissatisfied** with their sex lives;
    - **Frustrated** with their sexual problem;
    - Engulfed by **guilt** about their sexual difficulties;
    - **Worried** about sex;
    - Likely to feel sexually **inadequate/inferior** and;
    - **Embarrassed**.

- One potential reason they are Concept Acceptors is they **tend to have sex more often** than FSAD sufferers in general – Their need for relief is even greater than those who have sex less frequently.
